PROFESSIONAL EXPERIENCE

Software Engineer — Raja Software Labs (Ness company) Jan 2025 – Present

- Engineered and scaled **reusable, modular UI components** using **React.js, JavaScript/TypeScript, Ember.js, and Redux**, standardizing frontend development across multiple applications through consistent component patterns, reusable interfaces, and separation of concerns — reducing code duplication by **30%** and improving **page load/render time by 22%** across consuming teams.
- Owned and resolved **50+ production-critical frontend issues** involving rendering failures, UI interactions, responsive layouts, and **cross-browser compatibility**; performed root-cause analysis and implemented targeted fixes and regression guards, **reducing UI-related production bugs by 35%** and improving application reliability across browsers and devices.
- Designed and implemented **recursive, data-driven rendering systems** for complex nested content including text, links, images, and emojis, while maintaining clean component architecture and implementing production-grade **accessibility (WCAG)** through ARIA attributes, screen-reader support, semantic behavior, and proper handling of visually hidden content.
- Built and maintained **end-to-end tests using Playwright** for critical user workflows and edge cases, strengthening frontend test coverage and **reducing regression issues by 40%**; contributed to shared frontend infrastructure, debugging reusable utilities and improving stability for applications consuming common platform components.
- Improved **responsive design, accessibility, and frontend performance** by addressing keyboard navigation, focus management, ARIA roles, screen-reader behavior, and critical **zoom/scaling issues from 125%–200%**, ensuring accessible and consistent user experiences across different devices, browsers, and display configurations.
- Integrated frontend components with **REST APIs**, handled asynchronous application flows and dynamic data-driven UI states, and collaborated with backend, product, QA, and platform teams to deliver and debug production-grade features.
- Developed and maintained **backend services and REST APIs using Rest.li**, exposing internal functionality through modular API endpoints, implementing request/response handling, and enabling communication between distributed application components.
- Contributed to **microservices architecture and API design** by converting tightly coupled internal functionality into reusable **REST API interfaces**, improving service integration, maintainability, and separation of concerns.
- Contributed to the migration of **data processing workflows from Azkaban to Apache Airflow**, improving workflow orchestration, monitoring, and retry handling, resulting in a **20% reduction in pipeline failures**.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), Java, Python, SQL, C++

Frontend: React.js, Ember.js, Redux, Context API, React Hooks, React Router, HTML5, CSS3, SCSS, Responsive Design, Accessibility (WCAG), Component-Based Architecture, Reusable UI Components, API Integration

Backend & APIs: Node.js, Express.js, REST APIs, Rest.li, Microservices, API Design

Performance & Testing: Playwright, JUnit, Performance Optimization, Code Splitting, Lazy Loading, Memoization, Cross-Browser Compatibility, Production Debugging

Databases: MongoDB, SQL

Development Tools: Git, GitHub, CI/CD, JIRA, Confluence, GitHub Copilot, Cursor, Claude, Apache Airflow, Azkaban

EDUCATION

Chandigarh University, Punjab 2021 – 2025

B.E. in Computer Science and Engineering — CGPA: 7.69

DAV Public School, B.S. City (CBSE) 2019 – 2021

CERTIFICATIONS & ACHIEVEMENTS

- IBM Full-Stack Developer Certification
- NPTEL: C++ (Elite), IoT (Gold), Discrete Mathematics (Silver)
